FAQS

What are digitally enhanced and delivered high resolution photos?

Most of the time the photos produced from the camera may not quite there yet in term of artistic looks, brightness, and colour consistency throughout the collection. In some occasions they require further attention to details such as removing distracted objects and merging few photos into one to achieve special effects.

All photos will be exported to high resolution. Such files are usually at ultra high quality resolution and you should have no problem printing them out on most large canvas sizes.

Photo will be delivered to you either on a USB or downloadable via web link (your choice)

What is a pro retouch photo?

In many occasions your photos will need even more attention to details, somewhat similar to beauty retouch to enhance the look of the photographs. These included but not limited to skin retouch, photo manipulation, removing complex distracted objects, and other complex enhancements.
